Industrial Popcorn Machine

Engineered for mass popcorn production, this industrial popcorn machine delivers automatic popping and coating with stable operation. It produces multi-flavor butterfly and mushroom popcorn and supports customized processing.

Gas Popcorn Machine

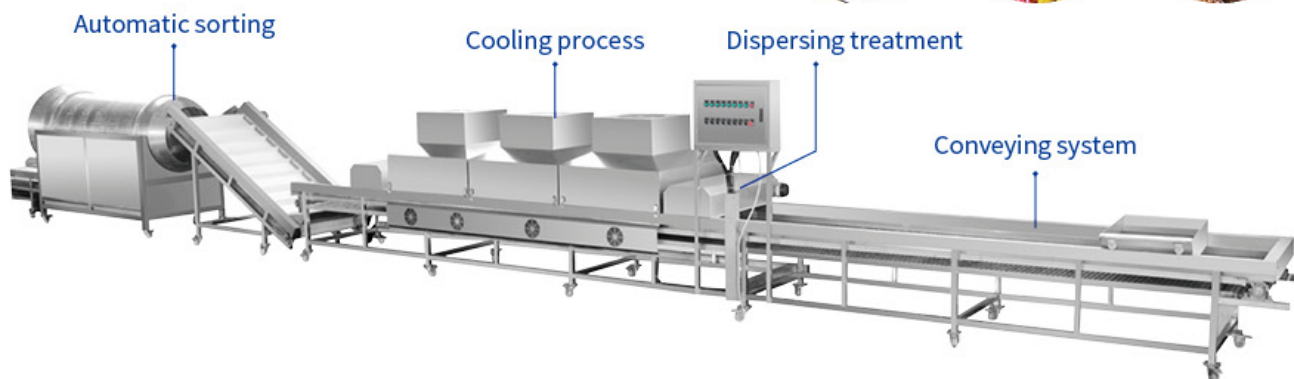

Electric Popcorn Machine

Specs	Model	Capacity	Power
Gas	100L	50kg/h	3kw
	200L	120kg/h	3kw
Electric	200L	120kg/h	30kw

Popcorn Production Line

The popcorn production line mainly consists of popcorn machines, conveying lines, cooling lines and screening & filtering lines.

The overall capacity of the whole line depends on the number of popcorn machines. The output of popcorn machines determines the length of other supporting lines.

Fully Automatic Planetary Mixing Kettle

This Fully Automatic Planetary Mixing Kettle features full-fit planetary stirrers with no blind spots to prevent burning. Available in gas, electric, steam and thermal oil heating with precise PLC temperature control. Hydraulic tilting discharge and one-key automatic operation save labor. Ideal for hot pot bases, jam, syrup, fillings and roasted nuts. Customizable capacity, stable running and easy maintenance.

Model: 50L-1000L

Heating Modes: Electric / Gas / Steam / Thermal Oil

Control Modes: PLC Automatic Control / Button Operation

Discharging Method: Hydraulic Automatic Tilting Discharge

Fruit and Vegetable Washing & Air Drying Production Line

This fully automatic fruit & vegetable washing and air-drying line is made of 304 stainless steel. Combined bubble washing and cold air drying removes dirt and pesticide residues gently at room temperature to retain produce color and nutrition. Its modular design supports optional brush washing, sterilization

and sorting units for leafy greens, roots, fruits and mushrooms. CE certified for export, the continuous automatic line cuts labor and production costs for global fresh-cut, frozen, dried and canned food factories.

Integrated Pasteurization, Cooling & Air-drying Line

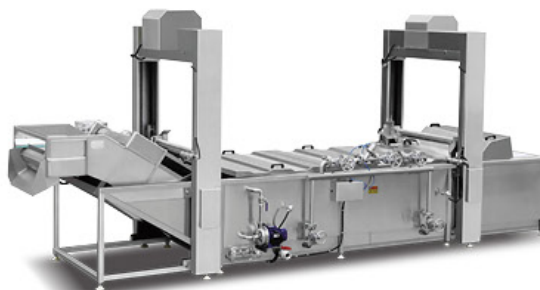

This fully automatic integrated pasteurization, cooling and air-drying line is made of 304 food-grade stainless steel. It adopts low-temperature constant sterilization to retain food flavor and nutrition, with gradient rapid cooling to inhibit bacterial growth. The flip air dryer thoroughly removes condensate on package surfaces to avoid mildew during storage. Frequency conversion adjustable and modular customizable, compatible with vacuum bags, glass bottles, boxes and other packages for pickles, meat, bean products, beverages and ready meals. CE sanitary certified for export, automatic continuous operation cuts labor costs and greatly extends product shelf life.

Crate Washing Machine

Fully automatic tunnel crate washing machine with 304 stainless steel body. It features multi-stage high-pressure hot water spray for cleaning and disinfection and an energy-saving water circulation system. Suitable for cleaning all types of food turnover crates and trays. An air-drying module can be installed optionally. It realizes continuous automatic operation to save labor, and the cleaning cleanliness meets food production hygiene standards.

Meat Thawing Machine

Low-temperature high-humidity meat thawing machine made of 304 stainless steel. Low-temperature slow thawing retains meat juice. Constant temperature & humidity circulation system ensures even thawing without juice loss, suitable for frozen pork, beef, chicken and duck, compliant with food workshop hygiene standards.

Frying Machine

Available in electric and gas heating styles, this fryer includes standalone machines and continuous frying lines for processing meat products, bean products, pasta and nuts. Designed with oil-water separation structure, it cuts oil consumption costs. Constructed from 304 stainless steel with precise temperature control, it supports customized capacity, stable operation and simple maintenance.

Small Frying Production Line

Fully Automatic Fryer

Semi-automatic Fryer

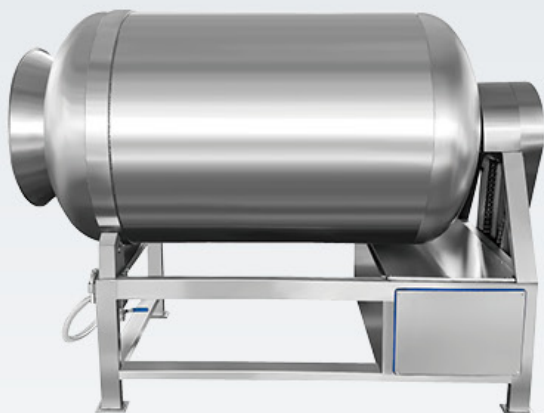

Automatic Oil Filter Machine

Stainless Steel Oil Storage Tank

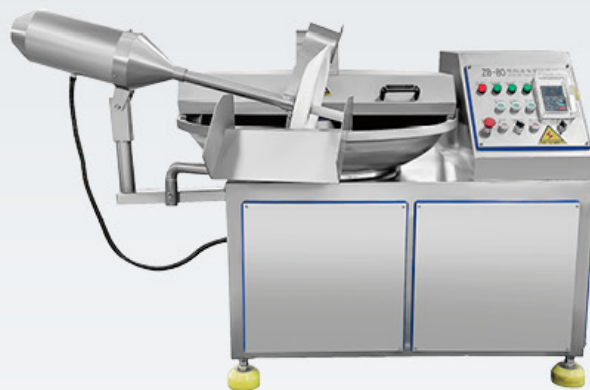

Vacuum Tumbler

Vacuum meat tumbler accelerates flavor penetration, improves meat product yield and texture, widely used for all kinds of marinated meat processing.

Meat Bowl Cutter

High-speed emulsifying bowl cutter refines meat and retains juice; vacuum models eliminate air pores, suitable for meat puree, meatballs, sausages and various prepared foods.

Meat Mixer

Double-shaft stuffing mixer blends fillings evenly, keeping meat intact without oil-water separation, ideal for dumpling, meatball and sausage fillings.

Industrial Meat Grinder

Commercial meat grinder with adjustable cutting plates, low-temperature grinding retains meat juice for raw & cooked meat pre-processing.

COMPANY INTRODUCTION

Located in Shandong Province, China, Chengchuan Machinery specializes in the production of food processing machinery to help customers realize safe food production.

We integrate R&D, production, sales and after-sales service to provide one-stop equipment manufacturing services. Supported by years of in-depth industry experience and technical accumulation, we have built an excellent market reputation and can deliver high-efficiency, durable and customized complete machinery solutions for customers worldwide.

Our core product lineup covers multi-arm mixing cooking kettles, automatic planetary cooking mixers, jacketed kettles, high-pressure cooking pots, rectangular brining cookers, automatic popcorn fryers, bubble washing production lines, pasteurization and blanching lines, air-drying lines, as well as sauce mixing trolleys. All equipment can be fully customized to meet clients' specific requirements.

Our machines possess a full set of top international authoritative certifications including CE, ISO 9001, FDA food compliance certificates and SGS test reports, fully conforming to global food safety production standards. Complete qualification credentials eliminate market access barriers for our clients. Our products sell well across Southeast Asia, Europe, the Middle East and many other regions around the world, gaining consistent recognition and long-term cooperative partnerships from overseas purchasers.

Adhering to the corporate philosophy of "Customer First, Quality Priority", we carry out strict full-process quality inspections to ensure finished products meet or even surpass customers' expectations. Meanwhile, we stick to eco-friendly production to boost sustainable environmental development.

In the future, keeping pace with market demands, Chengchuan Machinery will continuously strengthen its core competitiveness, strive to become a top-tier food machinery manufacturer in the industry, and achieve win-win development hand in hand with all global partners.
